

Question 2

Correct

Marked out of
5.00[Flag question](#)

Objective

This challenge will help you to learn how to take a character, a string and a sentence as input in C.

To take a single character **ch** as input, you can use `scanf("%c", &ch);` and `printf("%c", ch)` writes a character specified by the argument `char` to `stdout`:

```
char ch;  
scanf("%c", &ch);  
printf("%c", ch);
```

This piece of code prints the character **ch**.

Task

You have to print the character, **ch**.

Input Format

Take a character, **ch** as input.

Output Format

Print the character, **ch**.

Answer: (penalty regime: 0 %)

```
1 #include <stdio.h>  
2 int main()  
3 {  
4     char a;  
5  
6     scanf("%c", &a);  
7  
8     printf("%c", a);  
9     return 0;  
10 }
```

	Input	Expected	Got	
✓	c	c	c	✓

Correct

Marked out of
3.00 Flag question

Objective

This is a simple challenge to help you practice printing to stdout.

We're starting out by printing the most famous computing phrase of all time! In the editor below, use either `printf` or `cout` to print the string **Hello, World!** to stdout.

Input Format

You do not need to read any input in this challenge.

Output Format

Print **Hello, World!** to stdout.

Sample Output

Hello, World!

Answer: (penalty regime: 0 %)

```
1 #include <stdio.h>
2 int main()
3 {
4     printf("Hello, World!");
5     return 0;
6 }
7
```

	Expected	Got	
✓	Hello, World!	Hello, World!	✓

Passed all tests! ✓

**Sample Input**

10 4
4.0 2.0

Sample Output

14 6
6.0 2.0

Explanation

When we sum the integers **10** and **4**, we get the integer **14**.
When we subtract the second number **4** from the first number **10**, we get **6** as their difference.

When we sum the floating-point numbers **4.0** and **2.0**, we get **6.0**. When we subtract the second number **2.0** from the first number **4.0**, we get **2.0** as their difference.

Answer: (penalty regime: 0 %)

```

1  #include <stdio.h>
2  int main()
3  {
4      int a,b;
5      float c,d;
6      scanf("%d",&a);
7      scanf("%d",&b);
8      scanf("%f",&c);
9      scanf("%f",&d);
10
11
12
13     printf("%d ",a+b);
14     printf("%d\n",a-b);
15     printf("%.1f ", c+d);
16     printf("%.1f",c-d);
17     return 0;
18
19 }
```

	Input	Expected	Got	
✓	10 4 4.0 2.0	14 6 6.0 2.0	14 6 6.0 2.0	✓
✓	20 8 8.0 4.0	28 12 12.0 4.0	28 12 12.0 4.0	✓

Passed all tests! ✓

First line of output prints the name of the student.

Second line of the output prints the average mark.

Constraints

Marks for each student lie in the range 0 to 100 (both inclusive)

Sample Input 1 :

A
3 4 6

Sample Output 1 :

A
4

Sample Input 2 :

T
7 3 8

Sample Output 2 :

T
6

Answer: (penalty regime: 0 %)

```
1 #include <stdio.h>
2 int main()
3 {
4     char a;
5     int b,c,d;
6     scanf("%c\n",&a);
7     scanf("%d",&b);
8     scanf("%d",&c);
9     scanf("%d",&d);
10
11     printf("%c\n",a);
12     printf("%d",(d+b+c)/3);
13     return 0;
14 }
```

	Input	Expected	Got	
✓	A 3 4 6	A 4	A 4	✓
✓	T 7 3 8	T 6	T 6	✓
✓	R 0 100 99	R 66	R 66	✓

Passed all tests! ✓

Question 3

Correct

Marked out of
1.00

Flag question

Write a program to print the **ASCII value** and the two adjacent characters of the given character.

Input

E

Output

69

D F

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main()
3 {
4     char a;
5
6
7     scanf("%c",&a);
8     printf("%d\n",a);
9     printf("%c %c",a-1,a+1);
10    return 0;
11
12
13 }
```

	Input	Expected	Got	
✓	E	69 D F	69 D F	✓

Passed all tests! ✓
